Paleoclimates: The Tropical Andes of Peru/Bolivia

I chose this map projection because the Andes Mountain Range runs N/S, thus a projection such as UTM which uses a standard meridian allows N/S regions to be shown as less distorted. The Tissot Ellipses show that there is limited distortion when showing the border between Peru and Bolivia. I would expect there is a slight distortion due to the curvature of the meridians as they get closer to the South Pole.
